

Enabling professionals
to demonstrate their capability
in the service of their profession

ABOUT AXIA DIGITAL

Founded in 1997 AXIA Digital has been trading for almost 25 years and has focused on ePortfolios for the last 20 years.

We work collaboratively with institutions, creating bespoke ePortfolios to suit clients' needs. We offer in-depth knowledge of the design and delivery of ePortfolios, our expertise can help improve upon original specifications to add value to our clients. Our prime objective is to be your partner not just another supplier and our track record includes (but is not limited to):

- Health Education England (HEE) Foundation and Core Dentists
- HEE Centre of Advancing Practice site
- New Zealand Institute of Medical Radiation Technology
- HEE Foundation Pharmacists
- RPS ePortfolios for post-graduate development
- CPD Now e-portfolio (Society and College of Radiographers)
- Online Practice Assessment for Learning, Bournemouth University
- Practice Assessment of Nurses and other Health professionals at Oxford Brookes University
- Professional Experience log (Association of Certified Chartered Accountants)

Through our vast experience, we have gained an in-depth knowledge and understanding of ePortfolios, and we intimately understand the importance of having systems that are secure and reliable. Our technology infrastructure has also overcome the challenges of hospital firewalls and other IT restrictions across health settings.

In the private sector, Axia works with two major accountancy professional bodies in the UK (ACCA, and ICAS). The Association of Chartered Certified Accountants' site has over one million users across the world.

WHAT WE DO

We build sites that are designed to enable individuals to capture evidence of their skills, that are normally demonstrated and assessed in a professional/work-based setting. Below are some of the benefits

- Our sophisticated platform enables us to control who can see and do what and when depending on their role and the group to which they belong. We then create a comprehensive audit trail of all these interactions.
- This platform is highly configurable, and we have successfully used to meet all our customers specific requirements.
- All our sites are both bespoke and 'off the shelf' because we use already developed code, albeit reconfigured to meet the specific requirements of individual customers. It also means we develop sites quickly.
- We have a long-standing track record of successfully working with Government organisations and agencies.
- Consequently, we know the standards we are required to meet particularly in relation to the management of data. We are accredited to ISO9001 and ISO27001.
- Our ability to build effective working relationships with our customers is evidenced by the longevity of many of the contracts we hold.

30,000 +

Radiographers

In the United Kingdom,
Ireland and New Zealand

OUR TECHNOLOGY OFFERS

We adopt a flexible approach to the construction of e-portfolios to reflect the exact assessment methodologies that our customers prefer. There is never a need to change their approach due to limitations of the platform. This helps to ameliorate numerous challenges that are often experienced when organisations adopt an e-portfolio, by recreating forms, systems, and processes that their customers are already familiar with.

- Our core platform underpins all we do, you therefore know that the underlying technology is scalable, secure and flexible.
- Sites are built using a modular approach, offering the ability to deliver multiple courses. A 'tree structure' is used to define the functionality/content displayed to each user.
- The same tree defines access roles allowing assessors access to users portfolios. We can restrict access from sections, pages, forms even down to individual fields.
- Everything is built mobile first, the sites automatically resize to the device being used to access the site.
- All data is stored within our UK data centre and is encrypted at rest and in transit
- All sites are protected by a Web Application Firewall
- We PEN test an implantation of our core platform monthly
- **NEW for 2023**—we are adding two factor authentication
- **NEW for 2023**—we are adding a Security Operation Centre to protect our hosting environment 24/7
